ABSTRACTED-PUB-NO: WO 200062993A

BASIC-ABSTRACT:

NOVELTY - Molding equipment has a rigid mould made from separate elements with devices pressing them together to form a cavity for shaping the surface of a composite material and a further device for pressing a surface of the material against the cavity.

DETAILED DESCRIPTION - The mould may have two end elements pressed against a central element surrounded by flexible watertight surfaces subject to external pressure. A bladder presses the material against the cavity The mould has a constant or variable cross- section along its length.

USE - Molding polymerizable composite material.

ADVANTAGE - The surface of the molded part that is not shaped by the cavity is free of geometric or dimensional effects.

DESCRIPTION OF DRAWING(S) - The drawing shows molding equipment
